微服务项目开发

1、项目开发流程

1.1、整体流程

1.2、人员配置流程

2、网络订餐系统

2.1、单体应用项目需求

前台展示:

用户登录, 用户退出, 菜品展示, 菜品订购, 我的订单

后台管理系统:

管理员登录,管理员退出,菜品管理(增加、查询、删除、修改),订单处理,用户管理 (管理员[增加、查询、删除、修改]、普通用户[增加、查询、删除、修改])

2.2、微服务应用需求

微服务应用需求是通过业务来拆分需求

2.2.1、服务提供者

account 提供账户服务:用户和管理员的登录退出。

menu 提供菜品服务:添加菜品,删除菜品,修改菜品,查询菜品

order 提供订单服务:添加订单,查询订单,删除订单,处理订单

user 提供用户服务:添加用户、查询用户,删除用户

2.2.2、服务消费者

分离出一个服务消费者,调用以上4个服务提供者。

服务消费者包含了客户端的前端页面和后台接口、后台管理系统的前端页面和后台接口。

用户/管理员直接访问的资源都保存在服务消费者中,服务消费者根据具体的需要调用四个服务提供者的业务逻辑,通过Feign实现负载均衡。

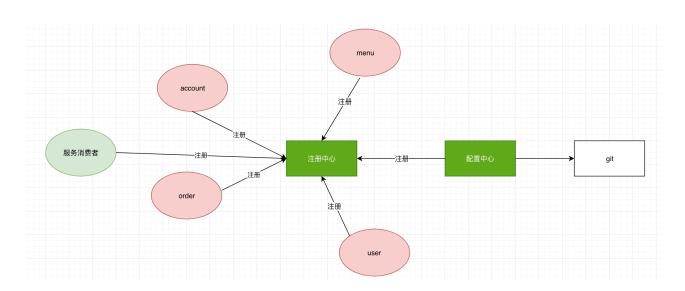

2.2.3、注册中心

四个服务提供者和一个服务消费者都需要在注册中心进 行注册

2.2.4、配置中心

同时可以使用配置中心来对配置文件进行统一集中管理

2.3、网络订餐系统微服务流程

3、数据库设计

3.1、表设计

管理员表

名	类型	长度	小数点	不是 null	键
id	int	11	0	√	A
username 用户名	varchar	255	0		
password 密码	varchar	255	0		

用户表

菜品分类表

菜品表

名	类	型	长度	小数点	不是 null	键
id	ir	nt 💌	11	0	V	P
name 菜名	V	archar	255	0		
price 价格	d	ecimal	10	0		
flavor 味道	V	archar	255	0		
tid 菜品分类	in	nt 💌	11	0		

订单表

名		类型	长度	小数点	不是 null	键	
id		int	11	0	✓	P	
uid	月户id	int	11	0			
mid 🕏	^{支品id}	int	✓ 11	0			
aid 管	管理员id	int	✓ 11	0			
date T	下单日期	date	O	0			
state T	^下 单状态	int	☑ 11	0			

3.2、创建表

```
/*
Navicat MySQL Data Transfer
Source Server : localhost
Source Server Type : MySQL
Source Server Version: 80011
Source Host : localhost
Source Database : ordersystem
Target Server Type : MySQL
Target Server Version : 80011
File Encoding : utf-8
Date: 10/16/2020 21:57:49 PM
*/
SET NAMES utf8;
```

```
SET FOREIGN KEY CHECKS = 0;
-- Table structure for `t admin`
DROP TABLE IF EXISTS `t admin`;
CREATE TABLE `t admin` (
  id int(11) NOT NULL AUTO INCREMENT,
  `username` varchar(255) DEFAULT NULL,
  `password` varchar(255) DEFAULT NULL,
 PRIMARY KEY ('id')
) ENGINE=InnoDB AUTO INCREMENT=2 DEFAULT
CHARSET=utf8;
-- Records of `t admin`
BEGIN;
INSERT INTO `t_admin` VALUES ('1', 'admin',
'admin');
COMMIT;
-- Table structure for `t menu`
DROP TABLE IF EXISTS `t menu`;
```

```
CREATE TABLE `t menu` (
  id int(11) NOT NULL AUTO INCREMENT,
 `name` varchar(255) DEFAULT NULL,
 `price` decimal(10,0) DEFAULT NULL,
 `flavor` varchar(255) DEFAULT NULL,
 `tid` int(11) DEFAULT NULL,
 PRIMARY KEY ('id')
) ENGINE=InnoDB AUTO INCREMENT=13 DEFAULT
CHARSET=utf8;
-- Records of `t menu`
BEGIN;
INSERT INTO `t menu` VALUES ('1', '香酥鸡',
'34', '香', '1'), ('2', '梅菜扣肉', '65',
'香', '1'), ('3', '三杯鸡', '33', '香', '1'),
('4', '毛血旺', '68', '辣', '1'), ('5', '菠菜
抖粉丝', '12', '辣', '2'), ('6', '凉拌豆腐皮',
'34', '苦', '2'), ('7', '酱牛肉', '32', '微
辣', '2'), ('8', '鱼头豆腐汤', '32', '香',
'3'), ('9', '瘦肉鸡蛋白菜汤', '21', '甜',
'3'), ('10', '西葫芦虾仁蒸铰', '10', '香',
'4'), ('11', '蛋炒饭', '15', '咸', '4'),
('12', '椰蓉面包', '8', '香', '5');
COMMIT:
```

```
-- Table structure for `t order`
DROP TABLE IF EXISTS `t_order`;
CREATE TABLE `t_order` (
  id int(11) NOT NULL AUTO INCREMENT,
  `uid` int(11) DEFAULT NULL,
  `mid` int(11) DEFAULT NULL,
  `aid` int(11) DEFAULT NULL,
  `date` date DEFAULT NULL,
  `state` int(11) DEFAULT NULL,
  PRIMARY KEY (`id`)
) ENGINE=InnoDB AUTO INCREMENT=13 DEFAULT
CHARSET=utf8;
-- Records of `t_order`
BEGIN;
```

```
INSERT INTO `t order` VALUES ('1', '1',
'7', '1', '2020-10-07', '1'), ('2', '1',
'2', '1', '2020-10-07', '1'), ('3', '1',
'5', '1', '2020-10-07', '1'), ('4', '1',
'9', '1', '2020-10-07', '1'), ('5', '1',
'10', '1', '2020-10-07', '1'), ('6', '1',
'10', null, '2020-10-07', '0'), ('7', '1',
'10', '1', '2020-10-07', '1'), ('8', '1',
'6', '1', '2020-10-07', '1'), ('9', '1',
'10', '1', '2020-10-07', '1'), ('10', '1',
'7', '1', '2020-10-07', '1'), ('11', '2',
'8', null, '2020-10-07', '0'), ('12', '2',
'12', null, '2020-10-07', '0');
COMMIT;
-- Table structure for `t type`
DROP TABLE IF EXISTS `t_type`;
CREATE TABLE `t type` (
  id int(11) NOT NULL AUTO INCREMENT,
  `name` varchar(255) DEFAULT NULL,
 PRIMARY KEY ('id')
) ENGINE=InnoDB AUTO INCREMENT=6 DEFAULT
CHARSET=utf8;
```

```
-- Records of `t type`
BEGIN;
INSERT INTO `t_type` VALUES ('1', '热菜'),
('2', '凉菜'), ('3', '烫羹'), ('4', '主食'),
('5', '烘焙');
COMMIT;
-- Table structure for `t user`
DROP TABLE IF EXISTS `t user`;
CREATE TABLE `t_user` (
  id int(11) NOT NULL AUTO INCREMENT,
  `username` varchar(255) DEFAULT NULL,
  `password` varchar(255) DEFAULT NULL,
  `nickname` varchar(255) DEFAULT NULL,
  'gender' varchar(255) DEFAULT NULL,
  `telephone` varchar(255) DEFAULT NULL,
  `registerdate` date DEFAULT NULL,
  `address` varchar(255) DEFAULT NULL,
  PRIMARY KEY ('id')
) ENGINE=InnoDB AUTO INCREMENT=3 DEFAULT
CHARSET=utf8;
```

```
-- Records of `t_user`
-- Records of `t_user`

BEGIN;
INSERT INTO `t_user` VALUES ('1',
'zhangsan', 'zhangsan', '张三', '男',
'17890980967', '2020-09-09', '北京'), ('2',
'lisi', 'lisi', '李四', '女', '18867851543',
'2020-10-10', '天津');
COMMIT;

SET FOREIGN_KEY_CHECKS = 1;
```

4、微服务架构搭建

4.1、创建父工程

ordering

4.2、导入依赖

```
<!-- 引入Spring Boot依赖 -->
<parent>
<groupId>org.springframework.boot</groupId>
```

```
<artifactId>spring-boot-starter-
parent</artifactId>
  <version>2.0.7.RELEASE
</parent>
<dependencies>
  <dependency>
<groupId>org.springframework.boot</groupId>
      <artifactId>spring-boot-starter-
web</artifactId>
 </dependency>
 <!-- 解决JDK 9以上版本没有JAXB API的问题 -->
 <dependency>
      <groupId>javax.xml.bind
      <artifactId>jaxb-api</artifactId>
      <version>2.3.0
 </dependency>
 <dependency>
      <groupId>com.sun.xml.bind</groupId>
      <artifactId>jaxb-impl</artifactId>
      <version>2.3.0
 </dependency>
 <dependency>
       <groupId>com.sun.xml.bind
       <artifactId>jaxb-core</artifactId>
```

```
<version>2.3.0
 </dependency>
<!--通过可升级模块的概念,仅以模块化形式支持独立
API 。使用它们,可以在任何阶段使用该模块的版本,即
在编译时,构建时或运行时。-->
 <dependency>
      <groupId>javax.activation
       <artifactId>activation</artifactId>
       <version>1.1.1
 </dependency>
 <!--以注解形式来简化java代码-->
 <dependency>
<groupId>org.projectlombok</groupId>
       <artifactId>lombok</artifactId>
       <optional>true
 </dependency>
</dependencies>
<!-- 引入Spring Cloud依赖, 管理Spring Cloud生
态各个组件 -->
<dependencyManagement>
      <dependencies>
          <dependency>
<groupId>org.springframework.cloud/groupI
d>
```

```
<artifactId>spring-cloud-
dependencies</artifactId>
<version>Finchley.SR2</version>
                <type>pom</type>
                <scope>import</scope>
            </dependency>
        </dependencies>
</dependencyManagement>
<!--指定JDK的编译版本-->
<build>
        <plugins>
            <plugin>
<groupId>org.apache.maven.plugins/groupId
>
                <artifactId>maven-compiler-
plugin</artifactId>
                <version>3.8.0
                <configuration>
                    <source>1.8</source>
<!--language level-->
                    <target>1.8</target>
<!--java compiler version-->
                </configuration>
            </plugin>
```

```
</plugins>
</build>
```

4.3、创建注册中心

4.3.1、创建工程

ordering-eureka

4.3.2、导入依赖

pom.xml

4.3.3、编写配置文件

application.yml

```
server:
  port: 8761
eureka:
  client:
    service-url:
    defaultZone:
http://localhost:8761/eureka/
    register-with-eureka: false
  fetch-registry: false
```

4.3.4、编写启动类

EurekaOrderingApplication.java

```
package com.ww;
import
org.springframework.boot.SpringApplication;
import
org.springframework.boot.autoconfigure.Spri
ngBootApplication;
import
org.springframework.cloud.netflix.eureka.se
rver.EnableEurekaServer;
@SpringBootApplication
@EnableEurekaServer
public class EurekaOrderingApplication {
    public static void main(String[] args)
{
 SpringApplication.run(EurekaOrderingApplic
ation.class,args);
    }
}
```

4.4、创建配置中心

4.4.1、创建工程

ordering-config

4.4.2、导入依赖

pom.xml

```
<dependencies>
        <dependency>
<groupId>org.springframework.cloud</groupI</pre>
d>
           <artifactId>spring-cloud-
config-server</artifactId>
<version>2.0.2.RELEASE
        </dependency>
        <dependency>
<groupId>org.springframework.cloud
d>
           <artifactId>spring-cloud-
starter-netflix-eureka-client</artifactId>
        </dependency>
</dependencies>
```

4.4.3、编写配置文件

applicaton.yml

```
server:
 port: 8762
spring:
  application:
    name: ordering-config
 profiles:
    active: native
  cloud:
    config:
      server:
        native:
          search-locations:
classpath:/shared #在shared路径下创建各个微服务
对应的配置文件
eureka:
  client:
    service-url:
      defaultZone:
http://localhost:8761/eureka/
```

在resources目录下创建shared文件夹

4.4.4、编写启动类

ConfigOrderingApplication.java

```
package com.ww;
import
org.springframework.boot.SpringApplication;
import
org.springframework.boot.autoconfigure.Spri
ngBootApplication;
import
org.springframework.cloud.config.server.Ena
bleConfigServer;
@SpringBootApplication
@EnableConfigServer
public class ConfigOrderingApplication {
    public static void main(String[] args)
{
 SpringApplication.run(ConfigOrderingApplic
ation.class,args);
    }
}
```

5、菜品服务

5.1、创建工程

ordering-menu

5.2、导入依赖

pom.xml

```
<dependencies>
       <dependency>
<groupId>org.springframework.cloud</groupI</pre>
d>
           <artifactId>spring-cloud-
starter-netflix-eureka-client</artifactId>
<version>2.0.2.RELEASE
       </dependency>
       <dependency>
<groupId>org.mybatis.spring.boot</groupId>
           <artifactId>mybatis-spring-
boot-starter</artifactId>
           <version>1.3.1
```

```
</dependency>
       <dependency>
           <groupId>mysql</groupId>
           <artifactId>mysql-connector-
java</artifactId>
           <version>8.0.11
       </dependency>
       <dependency>
<groupId>org.springframework.cloud
d>
           <artifactId>spring-cloud-
starter-config</artifactId>
<version>2.0.2.RELEASE
       </dependency>
</dependencies>
```

5.3、编写配置文件

bootstrap.yml

```
spring:
    application:
        name: menu
profiles:
    active: dev
cloud:
    config:
        uri: http://localhost:8762
        fail-fast: true #开启配置文件失败快速响应
```

menu-dev.xml

resources->shared->menu-dev.xml

```
server:
  port: 8020
spring:
  application:
    name: menu
  datasource:
    name: ordersystem
    url:
jdbc:mysql://localhost:3306/ordersystem
    username: root
    password: Root123456
eureka:
  client:
```

```
service-url:
    defaultZone:
http://localhost:8761/eureka/
```

5.4、编写启动类

MenuApplication.java

```
package com.ww;
import
org.springframework.boot.SpringApplication;
import
org.springframework.boot.autoconfigure.Spri
ngBootApplication;
@SpringBootApplication
public class MenuApplication {
    public static void main(String[] args)
{
 SpringApplication.run(MenuApplication.clas
s, args);
    }
}
```

5.5、菜品服务操作

5.5.1、配置实体类

Menu.java

```
package com.ww.entity;
import lombok.Data;

@Data
public class Menu {
    private long id;
    private String name;
    private double price;
    private String flavor;
}
```

5.5.2、编写操作接口

MenuRepository.java

```
package com.ww.repository;
import com.ww.entity.Menu;
import java.util.List;
```

```
public interface MenuRepository {
   public List<Menu> findAll(int index,
int limit);
   public int count();
   public void save(Menu menu);
   public void update(Menu menu);
   public void delete(long id);
   public Menu findById(long id);
}
```

5.5.3、修改menu-dev.yml配置

ordering-config->shared->menu-dev.yml

```
mybatis:
    mapper-locations:
classpath:/mapping/*.xml
    type-aliases-package: com.ww.entity #配置
文件中可省略前缀
```

5.5.4、配置操作映射文件

rescources->mapping->MenuRepository.xml

```
<?xml version="1.0" encoding="UTF-8"?>
```

```
<!DOCTYPE mapper PUBLIC "-
//mybatis.org//DTD Mapper 3.0//EN"
"http://mybatis.org/dtd/mybatis-3-
mapper.dtd">
<mapper
namespace="com.ww.repository.MenuRepository"
">
    <!-- 配置查询所有操作 -->
    <select id="findAll"</pre>
resultType="com.ww.entity.Menu">
        select * from t menu limit #
{param1},#{param2}
    </select>
    <select id="count" resultType="int">
        select count(id) from t menu
    </select>
    <select id="findById"</pre>
parameterType="long"
resultType="com.ww.entity.Menu">
        select * from t menu where id=#{id}
    </select>
    <insert id="save"</pre>
parameterType="com.ww.entity.Menu">
        insert into
t menu(mame, price, flavor) values(#{name}, #
{price},#{flavor})
```

5.5.5、创建控制器

MenuHandler.java

```
package com.ww.controller;
import com.ww.entity.Menu;
import com.ww.repository.MenuRepository;
import
org.springframework.beans.factory.annotatio
n.Autowired;
import
org.springframework.web.bind.annotation.Get
Mapping;
```

```
import
org.springframework.web.bind.annotation.Pat
hVariable;
import
org.springframework.web.bind.annotation.Reg
uestMapping;
import
org.springframework.web.bind.annotation.Res
tController;
import java.util.List;
@RestController
@RequestMapping("/menu")
public class MenuHandler {
    @Autowired
    private MenuRepository menuRepository;
    @GetMapping("/findAll/{index}/{limit}")
    public List<Menu>
findAll(@PathVariable("index") int
index,@PathVariable("limit") int limit){
        return
menuRepository.findAll(index,limit);
    }
```

5.5.6、修改启动类

5.5.7、启动服务测试

http://localhost:8020/menu/findAll/0/10

5.6、菜品服务调用

5.6.1、创建工程

ordering-client

5.6.2、导入依赖

pom.xml

```
<groupId>org.springframework.cloud/groupI
d>
           <artifactId>spring-cloud-
starter-netflix-eureka-client</artifactId>
 <version>2.0.2.RELEASE
       </dependency>
       <dependency>
<groupId>org.springframework.cloud/groupI
d>
           <artifactId>spring-cloud-
starter-openfeign</artifactId>
<version>2.0.2.RELEASE
       </dependency>
       <dependency>
<groupId>org.springframework.boot</groupId</pre>
>
           <artifactId>spring-boot-
starter-thymeleaf</artifactId>
       </dependency>
       <dependency>
```

注意:

使用模板thymeleaf

Spring Boot默认存放模板页面的路径在 src/main/resources/templates

Thymeleaf默认的页面文件后缀是.html

5.6.3、编写配置文件

bootstrap.yml

```
spring:
   application:
      name: client
   profiles:
      active: dev
   cloud:
      config:
      uri: http://localhost:8762
      fail-fast: true
```

client-dev.yml

resources->shared->client-dev.xml

```
server:
  port: 8030
spring:
  application:
    name: client
  thymeleaf:
    prefix: classpath:/static/
    suffix: .html
```

5.6.4、编写启动类

ClientOrderingApplication.java

```
package com.ww;
import
org.springframework.boot.SpringApplication;
import
org.springframework.boot.autoconfigure.Spri
ngBootApplication;
import
org.springframework.cloud.openfeign.EnableF
eignClients;
@SpringBootApplication
@EnableFeignClients
public class ClientOrderingApplication {
    public static void main(String[] args)
{
 SpringApplication.run(ClientOrderingApplic
ation.class,args);
    }
}
```

5.6.5、配置实体类

将Menu.java复制到ordering-client->com.ww.entity

5.6.6、创建Feign调用

MenuFeign.java

```
package com.ww.feign;
import com.ww.entity.Menu;
import
org.springframework.cloud.openfeign.FeignCl
ient;
import
org.springframework.web.bind.annotation.Get
Mapping;
import
org.springframework.web.bind.annotation.Pat
hVariable;
import java.util.List;
@FeignClient(value="menu")
public interface MenuFeign {
 @GetMapping("/menu/findAll/{index}/{limit}
")
    public List<Menu>
findAll(@PathVariable("index") int index,
@PathVariable("limit") int limit);
```

5.6.7、创建控制器

ClientMenuHandler.java

```
package com.ww.controller;
import com.ww.entity.Menu;
import com.ww.feign.MenuFeign;
import
org.springframework.beans.factory.annotatio
n.Autowired;
import
org.springframework.web.bind.annotation.Get
Mapping;
import
org.springframework.web.bind.annotation.Pat
hVariable;
import
org.springframework.web.bind.annotation.Req
uestMapping;
import
org.springframework.web.bind.annotation.Res
tController;
import java.util.List;
```

```
@RestController
@RequestMapping("/client/menu")
public class ClientMenuHandler {
     @Autowired
     private MenuFeign menuFeign;
     @GetMapping("/findAll/{index}/{limit}")
     public List<Menu>
findAll(@PathVariable("index") int index,
     @PathVariable("limit") int limit){
        return
menuFeign.findAll(index,limit);
     }
}
```

5.6.8、启动服务测试

http://localhost:8030/client/menu/findAll/0/10

5.7、菜品服务页面

5.7.1、前端UI框架

创建static文件夹和index.html页面

Layui

下载: https://www.layui.com/

解压后将框架放入到static.layui文件夹(client->resources->static)

Jquery

下载: https://jquery.com/download/ 或b173.com/jquery/

解压后将框架放入到js文件夹(client->resources->static->js)

5.7.2 index.html

thymeleaf: Thymeleaf 最为显著的特征是增强属性,任何属性都可以通过th:xx 来完成交互,例如th:value最终会覆盖value属性。

教程: https://www.jianshu.com/p/908b48b10702

```
<link rel="stylesheet"</pre>
th:href="@{/layui/css/layui.css}"
media="all">
</head>
<body>
<div class="layui-container" style="width:</pre>
700px; height: 600px; margin-top:
0px;padding-top: 60px;">
    <div style="margin-left: 460px; width:</pre>
200px;">
        欢迎回来! <a
href="/account/redirect/order" th:text="张
="></a><a
href="/account/logout">   
<button class="layui-btn layui-btn-warm</pre>
layui-btn-radius">退出</button></a>
    </div>
    <table class="layui-hide" id="test"
lay-filter="test">
    <script type="text/html" id="barDemo">
        <a class="layui-btn layui-btn-xs"
lay-event="order">订购</a>
    </script>
```

```
<script th:src="@{/layui/layui.js}"</pre>
charset="utf-8"></script>
    <script>
        layui.use('table', function(){
            var table = layui.table;
            table.render({
                elem: '#test'
                ,url:'/client/findAll'
                ,title: '菜单列表'
                ,cols: [
                        {field: 'id',
width:100, title: '编号', sort: true}
                         ,{field:'name',
width:200, title: '菜品'}
                        ,{field:'price',
width:100, title: '单价'}
                         ,{field:'flavor',
width:100, title: '口味'}
{field:'tid',width:100, title: '分
类',templet:function(data){
                             //return
data.type.name
                           return ''
```

```
}
                        ,{fixed: 'right',
title:'操作', toolbar: '#barDemo', width:70}
                ]
                ,page: true
            });
            //监听行工具事件
            table.on('tool(test)',
function(obj){
                var data = obj.data;
                if(obj.event === 'order'){
window.location.href="/order/save/"+data.i
d;
                }
            });
        });
    </script>
</div>
<script>
    //二级菜单联动
    layui.use('element', function(){
```

```
var element = layui.element;

});
</script>
</body>
</html>
```

访问:

http://localhost:8030/index.html

问题:

不能直接访问html文件,不然无法加载th

修改: ClientMenuHandler.java

```
//....
@GetMapping("/redirect/{location}")
public String
redirect(@PathVariable("location") String
location){
    return location;
}
//....
```

启动服务测试

http://localhost:8030/client/redirect/index

编号 🌲	菜品	单价	口味	分类	操作
数据接口请求异常:错误					
					

传参方式:

```
▶ GET <a href="http://localhost:8030/client/findAll/0/10?page=1&limit=10">http://localhost:8030/client/findAll/0/10?page=1&limit=10</a> 500
```

修改: ClientMenuHandler.java

```
//.......
@Autowired
private MenuFeign menuFeign;
@GetMapping("/findAll")
@ResponseBody
public List<Menu>
findAll(@RequestParam("page") int page,
@RequestParam("limit") int limit){
        int index = (page-1)*limit;
        return
menuFeign.findAll(index,limit);
}
//....
```

5.7.3、返回数据格式不对

数据正确正确返回格式:

创建MenuVO模块

ordering-menu->com.ww.entity->MenuVO.java

```
package com.ww.entity;
import lombok.AllArgsConstructor;
import lombok.Data;
import lombok.NoArgsConstructor;
import java.util.List;
@Data
```

```
@AllArgsConstructor
@NoArgsConstructor
public class MenuVO {
    private int code;
    private String msg;
    private int count;
    private List<Menu> data;
}
```

修改MenuHandler.java

ordering-menu->com.ww.controller->MenuHandler.java

```
//....
@GetMapping("/findAll/{index}/{limit}")
public MenuVO
findAll(@PathVariable("index") int index,
@PathVariable("limit") int limit){
    return new
MenuVO(0,"",1000,menuRepository.findAll(index,limit));
}
//....
```

拷贝: MenuVO.java

MenuVO.java拷贝到ordering-client->com.ww.entity

修改: MenuFeign.java

```
//....
@GetMapping("/menu/findAll/{index}/{limit}"
)
public MenuVO
findAll(@PathVariable("index") int index,
@PathVariable("limit") int limit);
//....
```

修改: ClientMenuHandler.java

```
//....
@GetMapping("/findAll")
@ResponseBody
public MenuVO findAll(@RequestParam("page")
int page, @RequestParam("limit") int limit)
{
    int index = (page-1)*limit;
    return
menuFeign.findAll(index,limit);
}
//....
```

5.7.4、启动服务测试

http://localhost:8030/client/redirect/index
